Amino acid sequence of the N-terminal 108 amino acid residues of the Behin of subcomponent Clq of the first component of human complement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The first component of complement is a calcium-dependent complex of the three subcomponents Clq, Clr, and Cls. Subcomponent Clq binds to immunoglobulin complexes, with resulting serial activation of Clr (enzyme), Cls (proenzyme), and the other eight components of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         #Eross-references GDB:119043; OMIM:120570

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The Cig subcomponent is composed of nine subunits, six of disulfide-linked dimers of the A (see PIR:CHHUQA) and B and three of which are disulfide-linked dimers of the C PIR:CHHUQC) chain. Equimolar amounts of the A, B, and C are found after reduction of the disulfide bonds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             #modified_site 4-hydroxyproline (Pro) #status

Sequence and developmental expression of the mRNA encoding the
seleno-protein of the sperm mitochondrial capsule in the mouse.";
DEV. BIOL. 137:395-402(1990).

-I- FUNCTION: STRUCTURAL PROTEIN OF THE SPERM MITOCHONDRIAL CAPSULE.

IMPORTANT FOR THE MAINTENANCE AND STABILIZATION OF THE CRESCENT
STRUCTURE OF THE SPERM MITOCHONDRIAL.

-I- SUBCELLULAR LOCATION: KERATINOUS MITOCHONDRIAL CAPSULE.

-I- TISSUE SPECIFICITY: TESTIS.

-I- DEVELOPMENTAL STAGE: LATE MEIOTIC AND BARLY HAPLOID CELLS.
                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

IT This immunoglobulin belongs to the IgA-g subclass. It was isolated
from a rabbit homozygous for a2, n80, de12,15, f71, g75 heavy
chain haplotype.
                                                                                                                                                                                                                                                                                                                                                                                  the start codon is "TTG" encoding a "Leu" amino acid in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ij
An immunoglobulin heterotetramer subunit consists of two identical light (kappa or lambda) and two identical heavy (alpha, delta, epsilon, gamma, or mu) chains usually stabilized by interchain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into larger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic Acids Res. (1990) 18:5289 cDNA from rat cells with reconstitutive galactose-epimerase activity in E. coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   B.; Starzinski-Powitz,

This protein is a porcine complement inhibitor encoded by pMCPcDNA (761098). The DNA is useful for large scale production of recombinant porcine complement inhibitor, which is useful for porcine organ transplantation into humans. The DNA clone pMCPcDNA is also useful in the analysis of the promoter region of porcine complement
                                                                                                                                                                                                                                                                                                                         DNA encoding porcine complement inhibitor - useful in porcine organ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     be used for treating obesity, diabetes, anorexia nervosa, bulinia, cachexia, chronic renal failure, renal disease, congestive heart failure, cachexia, chronic renal failure, renal disease, congestive heart failure, impaired glucose tolerance and sexual dysfunction. The agonist is useful for treating anorexia nervosa, bulimia and cachexia. The HFGANZ receptor ligand is useful for treating e.g. bacterial, fungal, protozoan and viral infections, particularly infections caused by HIV-1 or HIV-2, pain, cancers, anorexia nervosa, bulimia, cachexia, obesity, diabetes, asthma, Parkinson's disease, both acute and congestive heart failure, hypotension, hypotension, urinary retention, osteoporosis, angina prostatic hypertrophy, chronic renal failure, renal disease, impaired glucose tolerance, sexual dysfunction and psychotic and neurological disorders including anxiety, schizophrenia, manic depression, delirium, dementia, severe mental retardation and dyskinesias such as Huntington's disease or gilles dela Tourett's syndrome.
                                                                                                                                                                                                                                                                                                                                                                     Human HFGAN7 receptor protein.

Human HFGAN7 receptor: protein.

HrGAN72 receptor: eating disorders; renal disease; heart failure;

Sexual dysfunction; HIV; cancer; Parkinson's disease; urinary retention;

osteoporosis; angina pectoris; myocardial infarction; psychotic disorder;

neurological disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The HFGAN72 receptor protein contains two ligands whose antagonists can
                                                                                                                                                                               Gaps
antagonists, in therapy, to detect Ab and to isolate cognate receptors. Oligonucleotides based on H35 cDNA can be used to detect
                               the hypocretin gene or its RNA transcript, and as antisense agents for inhibiting gene expression. H35 cDNA can also be used for recombinant protein production. The Ab can be used to detect or quantify hypocretin proteins and as a therapeutic inhibitor. Sequence 130 AA;

                                                                ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a novel mammalian lysophosphatidic acid acyltransferase (LPAAT) enzyme, designated LPAAT I. Enzymes LPAAT I, LPAAT I. LPAAT I, LPAAT I, LPAAT I, LPAAT I, and LPAAT II are human homologues of non mammalian forms of LPAAT. The sequences can be used to screen for LPAAT inhibitors and to study the role of LPAAT enzymes in signal transduction and disease. note: the present sequence does not appear in the specification; it was sequence 329 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        21-AUG-1990 (first entry)
Xenopus Vg1 protein for osteogenic device.
Osteogenic device; osteogenic protein; endochronal bone; biodegradable
                                                                                                                                                                                                                                                                                                                                                                        18-MAR-1998 (first entry)
Lysophosphatidic acid acyltransferase enzyme LPAAT I splice variant 1.
Lysophosphatidic acid acyl transferase; LPAAT; mammalian;
LPAAT inhibitor; signal transduction.
                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mammalian lyso-phosphatidic acid acyl-transferase enzymes - and related DNA, useful for isolating inhibitors and studying the role of the enzymes in signal transduction Disclosure, Page -; 5pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Osteogenic devices comprising matrix contg. osteogenic proteins prepd. by recombinant techniques.

association with a biocompatible, in vivo biodegradable matrix. The protein is produced by expression of the recombinant DNA in a host cell and comprises more than one polypeptide chain, with an amino acid sequence sufficiently duplicative of COP5, COP7, COP16 or OP1. The protein and the implantable devices enable optimal predictable bone formation. Clinical applications include correction of acquired and congenital cranicfacial and other skeletal or dental anomalies, induction of local endochondral bone formation in non-union fractures, peridontal applicas. requiring bone formation and cartilage repair, eg in the see also P95679-P95692 and N95097.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     W52512 standard; peptide; 14 AA.
W52512;
01-JUL-1998 (first entry)
Cyclic peptide of the invention.
Loop region; cyclic peptide; antimicrobial; disinfectant; therapy;
preservative; amphipathic anti-parallel beta-sheet region; plant disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DNA encoding human uridine diphosphate galactose-4-epimerase - used in the treatment and diagnosis of galactosaemia claim 1; page 43-44, 59pp; Bnglish.

Claim 1; page 43-44, 59pp; Bnglish.

Human mature uridine diphosphate galactose-4-epimerase (UDP-G4E) (W01619) catalyses a reversible reaction between UDP-glucose and UDP-galactose that allows galactose residues to enter into the main UDP-galactose metabolism. A deficiency of the enzyme results in galactosaemia. The amino acid sequence of UDP-G4E was deduced from a CDNA clone (158301) derived from a human endometrial tumour

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Wilson S, Yanaqisawa M; corresponding DNA, agonists, ntains two ligans whose antagonists can be betes, anorexia nervosa, bulimia, cachexia sease, congestive heart failure, impaired signortion. The agonist is useful for rim and cachexia. The HFGAN7 receptor is bacterial, fungal, protozoan and viral lions caused by HVV-1 or HVV-2, pain, mia, achexia, obesity, diabetes, asthma, and congestive heart failure, and congestive heart failure, imia, cachexia, obesity, diabetes, asthma, and congestive heart failure,

Indiaguoses given in W21731-32 represent fusion proteins which contain The sequences given in W21731-32 represent fusion proteins which contain NuMA (nuclear mitoric apparatus). The fusion proteins were used in the identification of NuMA interecting proteins (NIP's) (see also W21729-30). Compounds which interfere with the interaction of NuMA with a known NIP are used to modulate cell division and/or proliferation. Ab, raised conventionally using NIP-1 or -2 as immunogen, are used to detect NIP (or their complexes) and to block their activity for diagnostic or therapeutic use, e.g. to detect defective NuMA or NIP which may be markers for aberrant (including malignant) cell growth (which can also be detected by nucleic acid sequencing). Also where malignancy is related to defects in NuMA or NIP, it can be treated by administration of the appropriate functional protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NIP-1; NIP-2; NuMA; nuclear mitotic apparatus; NuMA interacting protein; cell division; proliferation; antibody; Ab; detection; malignant cell growth.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ŏ
Disclosure; Fig 7; 138pp; French.

C The invention relates to the production of mammalian collagen type I gene were isolated from a MG-63 osteosarcoma library. Clone alpha3 contained sequence encoding amino acids contained sequence, whereas clone alpha2, contained sequence encoding amino acids 171-1454 of the protein and around 500 bp of the 3' untranslated region. The 2 clones were used to generate a number of fragments which were used to construct composite sequences encoding variant collagem molecules. The fragments are: (A) containing nucleotides (nt) -4 to 479;

CC The fragments are: (A) containing nucleotides (nt) -4 to 479;

CC The fragments are: (A) containing nucleotides (nt) -4 to 479;

CC The fragments are: (A) containing nucleotides (nt) -4 to 479;

CC The whole of the amino propeptide and bases (6-77 from the sequence encoding the N-terminus of the pro-collagen amino propeptide domain; (C) the whole of the amino propeptide domain (nt 72-479); (D) all of the whole of the amino propeptide domain (nt 535-1920); (E) the Draill-BamHI fragment (1709-2808) of alpha22, encoding as 567-936 of the central helicoidal domain in the ER. This sequence companies (C) the C-terminus of the C-propeptide domain; (C) the C-terminus of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                as prostheses for cardiac valves, ligaments or tendons; skin substitutes; gingival implants; microcapsules for perfumes; guide tubes for nerve regeneration; slow release products for antibiotics, growth factors,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              anticancer agents or anti-inflammatories; surgical thread and components of ointments). They are suitable for treating any disorder related to collagen dysfunction and gelatin, produced from collagen, is used to produce glues, surgical prostheses and foods.

Disclosure; Fig 2; 69pp; English.

Disclosure; Fig 2; 69pp; English.

ProTHE refers to THE having a molecular weight of about 26,000,

which is the prohormone form of ThFa. ProTHE is cleaved to a lower

molecular weight mature' form, pref. 17kb, which, in its multimeric

(usually trimeric) form, is substantially involved in producing life-
threatening physiological changes associated with sepsis. ProTHE is

cleaved by convertase. One TNF convertase is serine protease

proteinase-3, also called PR-3, P-29B or myeloblasin. A suitable

source of convertase is the HL60 call line (or extracts, or the

culture media in which it is grown). The convertase produced by

HL60 has been sequenced and is identical to the known lymphocyte

serine protease PR-3 which has other activities unrelated to TNF
                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                  Ç
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cpds. Which inhibit formation of mature tumour necrosis factor from its precursor - identified using TNF convertase, e.g. mutein(s), antibodies or peptide phosphonate(s), for preventing and treating sepsis, AIDS, auto-immune disease etc.
Claim 2; Columns 43-60; 68pp; English.#
The present sequence is a protein (OA-519) cross-reactive with the haptoglobin related (hpr) gene product. OA-519 can be used raise antibodies reactive with epitopes found on the hpr gene product, but not on haptoglobin 1 or 2, useful in cancer, especially breast cancer, prognosis assays.
                                                                                                                                                                                                                                                                                                                                                                ;

PAM 150 Gap 15 Scoring table:

Sequence:

77977 seqs, 28268293 residues Searched:

Post-processing: Minimum Match 0% Listing first 45 summaries

swiss-prot37 1:swissprot Database:

Mean 31.574; Variance 48.443; scale 0.652 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FUNCTION: E2 REGULATES VIRAL TRANSCRIPTION AND DNA REPLICATION.

IT BINDS TO THE E2RE RESPONSE ELEMENT (5'-ACCNNNNNGGT-3') PRESENT
IN MULTIPLE COPIES IN THE REGULATORY REGION. IT CAN EITHER
ACTIVATE OR REPRESS TRANSCRIPTION DEPENDING OF E2RE'S POSITION
WITH REGARDS TO PROXIMAL PROMOTER ELEMENTS. REPRESSION OCCURS
BY STERICALLY HINDERING THE ASSEMBLY OF THE TRANSCRIPTION
INITIATION COMPLEX. THE E1-E2 COMPLEX BINDS TO THE ORIGIN OF DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE FROM N.A.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The HFGAN72 receptor protein contains two ligands whose antagonists can be used for treating obesity, diabetes, anorexia nervosa, bulimia, cachexia, chronic renal fallure, renal disease, congestive heart failure, impaired glucose tolerance and sexual dysfunction. The agonist is useful for treating anorexia nervosa, bulimia and cachexia. The HFGAN72 receptor ligand is useful for treating e.g. bacterial, fungal, protozoan and viral infections, particularly infections caused by HIV-1 or HIV-2, pain, cancers, anorexia nervosa, bulimia, cachexia, obesity, diabetes, asthma, Parkinson's disease, both acute and congestive heart failure, hypotension, hypotension, unimary retention, osteoporosis, angina pectoris, myocardial infarction, ulcers, asthma, allergies, benign prostatic hypertrophy, chronic renal failure, renal disease, impaired allucose tolerance, sexual dysfunction and psychotic and neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human HFGAN72 receptor protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 disorders including anxiety, schizophrenia, manic depression, delirium, dementia, severe mental retardation and dyskinesias such as Huntington' disease or Gilles dela Tourett's syndrome.
                                                                                                                                                                                                                                                         Gaps
antagonists, in therapy, to detect Ab and to isolate cognate receptors. Oligonucleotides based on H35 cDNA can be used to detect
                                              the hypocretin gene or its RNA transcript, and as antisense agents for inhibiting gene expression. H35 cDNA can also be used for recombinant protein production. The Ab can be used to detect or quantify hypocretin proteins and as a therapeutic inhibitor. Sequence 130 AA;
